

Smart Student Productivity Platform

Academic Productivity & Multi-Role Dashboard System

Roles, Responsibilities & Task Details

Reference: BRD v1.0 | SOW v1.0

Jira Project: Smart_student_productivity (SSPP)

Created by: Scrum Master — Sweta Kadam

Client: Mr. Sayantan (Client)

Role	Name
Scrum Master	Sweta Kadam
Tech Lead	Riddhi Zunjarrao
Solution Architect	Ragini Singh
Project Manager & Business Analyst	Sakshi Shingole
Client	Mr. Sayantan (Client)

Project Description

The Smart Student Productivity Platform (SSPP) is a multi-role academic productivity and dashboard system designed to serve Students, Faculty, HOD/Domain Admins, and Administrators through a single connected platform. The project began with domain research and business problem identification, followed by definition of business objectives, in-scope and out-of-scope requirements, and a formal Business Requirements Document (BRD) signed off by the client. Stakeholders, user roles, and a Role-Access Matrix (RBAC) were defined to govern access across all four user roles, and a Statement of Work (SOW) was prepared covering deliverables, responsibilities, and timelines.

Development covers role-specific dashboards — Student (academic schedule, assignments, attendance, AI doubt solver, productivity tools, and study community), Faculty (academic management and student interaction), HOD/Domain Admin (faculty & student management, academic monitoring and reports), and Administrator (user, role & permission management, system configuration). These are backed by a dedicated backend with authentication & authorization, core REST APIs, and integration with external services such as Google Meet and the AI Doubt Solver. The platform is validated through functional, API, security, and regression testing, followed by client-driven User Acceptance Testing (UAT), final system verification, and production deployment with smoke testing.

Scrum Master — Sweta Kadam

Role Description

As Scrum Master, Sweta Kadam owns the day-to-day rhythm of the project — running ceremonies, keeping the team aligned to sprint goals, and acting as the bridge between the delivery team and the client. Beyond facilitation, she also carries direct delivery ownership for the Faculty Dashboard and leads the platform through its testing and User Acceptance Testing phases before release.

- Facilitate the project kickoff meeting and all development discussion meetings, setting the tone and cadence for the team.
- Plan and run sprint ceremonies across all four sprints — sprint planning, stand-ups, reviews, and retrospectives.
- Own end-to-end delivery of the Faculty Dashboard module, including its core layout, academic management features, and student interaction tools.
- Track progress against each sprint goal, flag risks early, and remove blockers so the team can deliver on time.
- Lead functional and UI testing coordination across all four dashboards, and drive final system verification before go-live.
- Own the full UAT cycle — preparing test scenarios, coordinating workflow validation with the client, and logging results and feedback.
- Act as the primary point of contact between the client and the delivery team, keeping communication transparent throughout the project.

Tasks

#	Task	Priority
1	Conduct Project Kickoff Meeting	High
2	Conduct Development Discussion Meetings	High
3	Plan & Facilitate Sprint Planning and Stand-ups	High
4	Facilitate Sprint Reviews & Retrospectives	High
5	Develop Faculty Dashboard – Core Layout & Navigation	Highest
6	Develop Faculty Dashboard – Profile & Settings	Highest
7	Develop Faculty Academic Management – Course & Content Handling	Highest
8	Develop Faculty Academic Management – Assignment & Grading Tools	Highest
9	Develop Faculty Student Interaction – Communication Tools	Medium
10	Develop Faculty Student Interaction – Google Meet Integration	Medium
11	Coordinate Functional Testing (All Dashboards)	High
12	Coordinate UI Testing (All Dashboards)	High
13	Prepare UAT Test Scenarios	High

#	Task	Priority
14	Execute UAT & Log Client Feedback	High
15	Perform Final System Verification & Go-Live Readiness	High

Tech Lead — Riddhi Zunjarrao

Role Description

As Tech Lead, Riddhi Zunjarrao owns the technical backbone of the platform — from the very first authentication flow and the Student Dashboard prototype, through the backend architecture and APIs, all the way to production deployment. She carries the largest share of hands-on build work across all four sprints and is also the primary owner of technical testing, defect resolution, and release readiness.

- Build the core authentication flows — user registration and login — that every other module depends on.
- Design and develop the Student Dashboard end-to-end: initial prototype, core layout, academic sections, and productivity & community features.
- Architect and build the backend: project structure, database design, data models, and configuration.
- Implement authentication & authorization, including session handling, role-based access control, and protected routes.
- Develop the core backend APIs for Student, Faculty, HOD, and Administrator roles, with validation and error handling built in.
- Integrate every dashboard with live backend data, and connect external services such as Google Meet and the AI Doubt Solver.
- Lead API, database, and security/role-based access testing, and drive bug fixing through to regression testing and final defect verification.
- Implement UAT-driven corrections and own production deployment — final build, environment configuration, deployment, and smoke testing.

Tasks

#	Task	Priority
1	Develop User Registration	Highest
2	Develop Login & Authentication	Highest
3	Develop Student Dashboard – Core Layout & Prototype	Highest
4	Develop Student Academic Dashboard – Full Build	Highest
5	Develop Student Productivity & Community – Full Build	Medium
6	Develop Backend Architecture & Database Setup	High
7	Develop Authentication & Authorization (Session, RBAC, Protected Routes)	High
8	Develop Core Backend APIs (Student, Faculty, HOD, Admin)	High
9	Develop Dashboard API Integration	High
10	Develop Academic Module Integration	High
11	Develop External Service Integration (Google Meet, AI Doubt Solver)	High
12	Conduct API, Database & Security Testing	High
13	Perform Bug Fixing & Regression Testing	High

#	Task	Priority
14	Implement UAT Feedback & Final Corrections	High
15	Execute Production Deployment & Smoke Testing	High

Solution Architect — Ragini Singh

Role Description

As Solution Architect, Ragini Singh is responsible for the platform's access and administration design — defining who can do what, and building out the HOD/Domain Admin experience that relies on that design. Her work sits at the intersection of security, data structure, and usability for academic administrators.

- Design the Role-Access Matrix (RBAC) that defines permissions and access boundaries across Student, Faculty, HOD/Domain Admin, and Administrator roles.
- Architect and build the HOD/Domain Admin Dashboard, including its structure, navigation, and profile handling.
- Design and implement Faculty, Student, Course & Subject management capabilities for HODs and Domain Admins.
- Define and build the academic monitoring and reporting layer — attendance tracking, performance monitoring, and academic reports.
- Ensure the access-control design implemented here stays consistent with what the backend team builds into authentication & authorization.

Tasks

#	Task	Priority
1	Design Role-Access Matrix (RBAC) – Student & Faculty	Highest
2	Design Role-Access Matrix (RBAC) – HOD/Domain Admin & Administrator	Highest
3	Finalize & Document RBAC Permissions	Highest
4	Develop HOD Dashboard – Core Layout & Navigation	Highest
5	Develop HOD Dashboard – Profile Handling	Highest
6	Develop HOD Dashboard – Data Filters & Search	High
7	Develop Faculty Management Module	High
8	Develop Student Management Module	High
9	Develop Course & Subject Management Module	High
10	Develop Faculty & Student Management – Bulk Actions & Validation	High
11	Design Attendance Tracking	Highest
12	Design Performance Monitoring	Highest
13	Develop Academic Reports Layer	Highest
14	Develop Academic Monitoring & Reports – Export & Summary Views	High
15	Align RBAC Design with Backend Authentication & Authorization	High

Project Manager & Business Analyst — Sakshi Shingole

Role Description

As Project Manager & Business Analyst, Sakshi Shingole owns the project from the business side — turning the client's goals into a documented, sign-off-ready plan, and later owning the Administrator Dashboard build. She is the primary author of the BRD and SOW, and the main point of contact for translating business needs into requirements the delivery team can build against.

- Lead domain research and identify the core business problems the platform needs to solve.
- Define the proposed solution, business objectives, and clear in-scope / out-of-scope boundaries for the project.
- Identify all stakeholders and define user roles & responsibilities across the platform.
- Define functional requirements and business rules for Student, Faculty, HOD, and Administrator roles.
- Drive the Business Requirements Document (BRD) through to final client sign-off.
- Prepare and finalize the Statement of Work (SOW) — deliverables, responsibilities, timeline, and milestones.
- Own the Administrator Dashboard build — user, role & permission management, and system configuration & administration.

Tasks

#	Task	Priority
1	Conduct Domain Research	High
2	Identify Business Problems & Define Proposed Solution	High
3	Define Business Objectives	High
4	Define In-Scope & Out-of-Scope Requirements	High
5	Identify Stakeholders	Highest
6	Define User Roles & Responsibilities	Highest
7	Define Student Requirements	Highest
8	Define Faculty Requirements	Highest
9	Define HOD, Admin Requirements & Business Rules	Highest
10	Obtain BRD Final Sign-Off	Highest
11	Prepare Statement of Work (SOW)	Highest
12	Define SOW Deliverables, Timeline & Milestones	Highest
13	Review and Finalize SOW	Highest
14	Develop Administrator Dashboard & User Management	Highest
15	Develop System Configuration & Administration	Highest
