
SMART STUDENT PRODUCTIVITY PLATFORM

Assignment 1: Introduction and System Overview

Project	Smart Student Productivity Platform
Source	Software Requirements Specification (SRS), Version 1.1
Organization	SR Pvt Ltd
Status	Draft
Prepared By	Project Team
Date	11/09/2026

1. Objective

- Understand the purpose and scope of the platform.
- Document the system objectives.
- Identify the technology stack specified in the SRS.
- Establish the overall foundation for the project.

2. Purpose

The SRS defines the functional and non-functional requirements of the Smart Student Productivity Platform. It describes expected system behavior, capabilities, user interactions, data requirements, security requirements, integrations and quality attributes.

The SRS provides a common reference for design, development, testing, deployment and user acceptance.

3. Scope

The platform is a centralized web-based academic platform for students, faculty members, Domain Administrators/HODs and Super Administrators.

- User authentication
- Role-based access
- Academic management
- Student dashboard
- Course management
- Assignments, assessments and examinations
- Attendance, results and performance
- Learning materials, tasks, calendar and schedules
- Notifications and communication
- AI-based doubt solving and faculty doubt escalation
- Study groups and online classes
- Administrative management, reports and monitoring

4. System Objectives

The system shall centralize academic information and provide role-specific academic functionality while improving student productivity and simplifying faculty academic management.

- Provide administrators with monitoring and reporting capabilities
- Provide AI-assisted academic support
- Enable controlled student collaboration
- Improve communication between students and faculty

5. Technology Stack

- Frontend: HTML5, CSS3, JavaScript
- Authentication: Firebase Authentication
- Database: Cloud Firestore
- Real-Time Features: Firebase Realtime Database
- Backend Logic: Firebase Cloud Functions
- File Storage: Cloudinary
- Hosting: Firebase Hosting
- Notifications: Firebase Cloud Messaging
- Security: Firebase Security Rules
- Online Meetings: Google Meet
- AI Integration: AI Service through Cloud Functions

6. Conclusion

This assignment covers the SRS foundation of the platform: its purpose, scope, objectives and technology stack.
